Office Action Summary

Art Unit: 1624

Claims 4, 5 and 6 are rejected under 35 U.S.C. 112, 5th paragraph. A multiple dependent claim may not be dependent on a multiple dependent claim.

A new "Abstract" is requested. The USPTO now uses a photogravier process, *rather* than hand set the Abstract. The Abstract needs to be on one sheet of paper, by itself, with *no* other data on the page.

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

BEM (formula I) is noted on pages 1 and 2 the specification. This seems to be claim 8. A new process does not make the compound allowable, again. Accordingly, claim 8 is rejected. Applicants seem to be saying BEM is known.

Note the PCT search found these processes did not include an inventive step.

"Due to the chemical structure of the educt and product the claimed process is considered to be novel vis-a-vis the state of the art as represented by the documents cited in the International Search Report (IPER). From these documents the Wittig-type olefination of DPPO of formula II is known to yield compounds very similar in structure to BEM of formula I of the present application.

It appears that the man skilled in the art when faced with the problem of preparing BEM who was aware of the olefination processes disclosed in the documents cited in the IPER would expect the process of the present application to exhibit the desired effects.

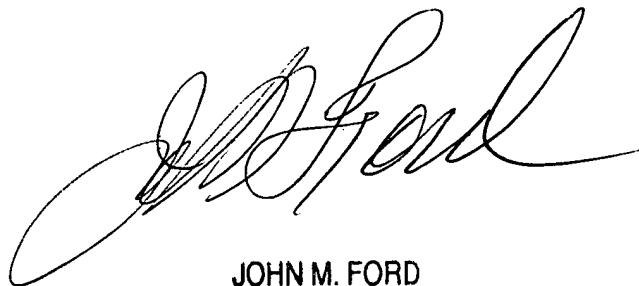

Art Unit: 1624

Thus, the process claimed is considered to be an analogy process not exhibiting any nonobvious properties or effects and, consequently, not to involve an inventive step. The subject-matter claimed does therefore not fulfil the requirements of Art. 33 (3) PCT.”

Accordingly, claims 9 and 10 are rejected under 35 U.S.C. 103 in view of the Y designation of the art on the PCT search report.
